RESULTS OF THE U.S. GEOLOGICAL SURVEY'S ANALYTICAL EVALUATION PROGRAM FOR STANDARD REFERENCE SAMPLES DISTRIBUTED IN OCTOBER 1999

By Jerry W. Farrar

ABSTRACT

This report presents the results of the U.S. Geological Survey's analytical evaluation program for six standard reference samples -- T-159 (trace constituents), M-152 (major constituents), N-63 (nutrient constituents), N-64 (nutrient constituents), P-33 (low ionic strength constituents), and Hg-29 (mercury) -- that were distributed in October 1999 to 149 laboratories enrolled in the U.S. Geological Survey sponsored interlaboratory testing program. Analytical data that were received from 131 of the laboratories were evaluated with respect to overall laboratory performance and relative laboratory performance for each analyte in the six reference samples. Results of these evaluations are presented in tabular form. Also presented are tables and graphs summarizing the analytical data provided by each laboratory for each analyte in the six standard reference samples. The most probable value for each analyte was determined using nonparametric statistics.

INTRODUCTION

The U.S. Geological Survey (USGS) conducts an interlaboratory analytical evaluation program semiannually. This program provides a variety of standard reference samples (SRSSs) to accomplish quality assurance testing of laboratories and to provide an adequate supply of samples that contribute to quality control programs of participating laboratories. Natural-matrix reference materials are preferred for use in this interlaboratory evaluation program. A series of samples are prepared and distributed each spring and fall.

The program began in 1962 with a single sample containing major constituents that was prepared from distilled water and reagent grade chemicals. Twenty-three USGS laboratories participated in the first analytical evaluation program. Since that time, objectives of the program have been to:

- (1) evaluate and improve the performance of USGS and other participating laboratories;
- (2) provide a library of carefully prepared, homogeneous, stable reference materials for use in the quality control programs of laboratories;
- (3) identify analytical problem areas;
- (4) identify quality assurance needs with respect to environmental analyses and develop new reference materials to meet these needs; and
- (5) evaluate the accuracy and precision of analytical methods.

A total of 195 USGS and non-USGS laboratories are enrolled in the program, which can currently provide 9 different types of SRSs:

1. Trace constituents.
2. Major constituents.
3. Nutrient constituents.
4. Low ionic-strength constituents.
5. Mercury.
6. Whole water (water with suspended sediment).
7. Acid mine water constituents.
8. Ground-water trace constituents.
9. Ground-water major constituents.

Though this is not a laboratory certification program, participation in this continuing quality assurance program is mandatory for all laboratories providing water-quality data for USGS sponsored reports or storage in the USGS national data bases. Federal, State, Municipal, and University laboratories can participate even though they do not provide data to the USGS. The results from this study can be used to alert participating laboratories of possible deficiencies in their analytical operations and provide reference materials for laboratory quality-control programs. Participating laboratories are identified only by a confidential laboratory code number.

A library of SRSs, from previous evaluations, is available. USGS offices and participating laboratories can request these SRSs for further testing, continuing quality assurance, and quality-control programs by contacting:

U.S. Geological Survey
Branch of Quality Systems
Denver Federal Center, Bldg. 53
P. O. Box 25046 MS 401
Denver, Colorado 80225-0046
(303) 236-1876

This report summarizes the analytical results submitted by 131 of the 149 laboratories that requested and were shipped SRSs for the October 1999 evaluation (table 1). Not all SRSs are requested or necessarily analyzed by all the laboratories; nor do all laboratories enrolled in the program participate in each evaluation. Analytical results for the following, which were mailed the week of October 5, 1999, are presented in this report.

T-159	Trace constituents	N-64	Nutrient constituents
M-152	Major constituents	P-33	Low ionic strength constituents
N-63	Nutrient constituents	Hg-29	Mercury

The USGS requested that analytical results be returned by November 14, 1999 for evaluation and preparation of this report. Laboratories that are providing analytical services to USGS offices are requested to analyze the appropriate SRSs for the same analytes requested by the USGS offices. All laboratories are requested to include the analytical methods used to determine the concentration of each analyte. When analytical method information was provided, it has been included in tables 11 - 16.

PREPARATION OF STANDARD REFERENCE SAMPLES

All of the SRSs used in this evaluation were prepared by USGS personnel located in Lakewood, Colorado, and were analyzed for analyte concentrations and physical property values before mailing. A library of these SRSs is maintained, and these SRSs can be requested by participating laboratories and USGS offices for use in their quality-control programs.

Trace constituents sample T-159 was prepared using water collected from the Big Thompson River near Drake, Colorado. The water was pumped through 0.45-, 0.2-, and 0.1-micrometer (μm) filters, in series, into a 1200-liter (L) polypropylene drum. The water was continuously circulated and passed through a 0.1- μm filter and ultraviolet sterilizer for 24 hours. Following this circulation, the water was acidified to pH 1.5 with nitric acid and chlorinated to 5 parts per million (ppm) free chlorine with sodium hypochlorite. The trace constituent concentrations were adjusted by adding reagent grade chemicals. The sample was circulated an additional 24 hours prior to bottling. During bottling, the sample was pumped through an ultraviolet sterilizer and a 0.1- μm filter. The polypropylene and fluorinated ethylene propylene bottles and caps used were acid leached with 0.2N HNO_3 , deionized-water rinsed, and autoclave sterilized.

Major constituents sample M-152 was prepared using water collected from the Fall River near Idaho Springs, Colorado. The water was pumped through 0.45- 0.2- and 0.1- μm filters, in series, into a 1200-L polypropylene drum. The water was chlorinated to 5-ppm free chlorine with sodium hypochlorite, continuously circulated, and passed through an ultraviolet sterilizer for 24 hours prior to bottling. The major constituent concentrations were adjusted by adding reagent grade chemicals. The sample was circulated an additional 24 hours prior to bottling. During bottling the sample was pumped through an ultraviolet sterilizer and a 0.1- μm filter. The polypropylene bottles and caps used were acid leached with 0.2N HNO_3 , deionized-water rinsed, and autoclave sterilized.

Nutrient constituents sample N-63 was prepared using deionized water. These samples were prepared the week prior to the mailing for this SRS evaluation. The water was pumped through 0.45-, 0.2-, and 0.1- μm filters, in series, into a 25-L polypropylene drum. The desired nutrient concentrations were obtained by adding reagent-grade chemicals. The sample was continuously circulated through an ultraviolet sterilizer for 24 hours prior to being bottled. The 30-milliliter (mL) glass vials used were new, amber, acid leached with 0.2N HCl , deionized-water rinsed, and autoclave sterilized.

Nutrient constituents sample N-64 was prepared using water collected from the Fall River near Idaho Springs, Colorado. These samples were prepared the week prior to the mailing for this SRS evaluation. The water was pumped through 0.45- 0.2- and 0.1- μm filters, in series, into a 200-L polypropylene drum and continuously circulated and passed through an ultraviolet sterilizer for 24 hours. The desired nutrient concentrations were obtained by adding reagent-grade chemicals. The sample was passed through a 0.1- μm filter while bottling. The 250-mL polyethylene bottles used were new, amber, acid leached 0.2N HCl , deionized-water rinsed, and autoclave sterilized.

Low ionic strength constituents sample P-33 was prepared in a 400-L polypropylene drum using snowmelt from Alice, Colorado. The water was pumped into the drum through 0.45- 0.2- and 0.1- μm filters in series. The desired phosphate and fluoride concentrations were obtained by adding reagent-grade chemicals. Prior to bottling, the sample was continuously mixed for 24 hours while being circulated through a 0.1- μm filter and an ultraviolet sterilizer. During bottling the sample was pumped through an ultraviolet sterilizer and a 0.1- μm filter. The 500-mL polypropylene bottles used were acid leached with 0.2N HNO_3 , deionized-water rinsed, and autoclave sterilized.

Mercury sample Hg-29 was prepared using water collected from the Fall River near Idaho Springs, Colorado. The sample was prepared in a 200-L polypropylene drum. The river water was pumped into this drum through 0.45-, 0.2-, and 0.1- μm filters in series. The water was continuously circulated and passed through a 0.1- μm filter and ultraviolet sterilizer for 48 hours. Nitric acid (5-percent, by volume) and dichromate compound (0.05-percent, by weight) were added to stabilize the sample. The desired mercury concentration was obtained by adding a mercury standard solution. Following an additional 24 hours of circulation, the sample was bottled. The 250-mL glass bottles and tetrafluoroethylene fluorocarbon resin caps used were new, acid leached with 0.2N HNO_3 , and deionized-water rinsed, and autoclave sterilized.

LABORATORY ANALYSES

The participating laboratories were asked to determine constituents that are summarized in table 2. The number of analytes varied from 28 in T-159 (trace constituents) to 1 in Hg-29 (mercury).

Table 2. -*Analytes determined in standard reference samples distributed in October 1999*

[mg/L, milligrams per liter; µg/L, micrograms per liter; µS/cm, microsiemens per centimeter at 25 degrees Celsius]

Constituent or property		Units	T-159	M-152	N-63	N-64	P-33	Hg-29

Laboratories were requested to identify the method used for each constituent according to analytical method codes in table 3.

Table 3. Analytical method codes

Code	Method
0	Other
1	Atomic absorption: direct, air
2	Atomic absorption: direct, nitrous oxide
3	Atomic absorption: graphite furnace
4	Inductively coupled plasma
5	Direct current plasma
6	Inductively coupled plasma/mass spectrometry
7	Ion chromatography
8	Atomic absorption: cold vapor
9	Atomic fluorescence
10	Atomic absorption: extraction [<i>specify chelating agents</i>]
11	Atomic absorption: hydride [<i>specify reducing agent</i>]
12	Flame emission
20	Titration: colorimetric [<i>specify color reagent</i>]
21	Titration: electrometric [<i>specify reducing or oxidizing agent/color reagent</i>]
22	Colorimetric: [<i>specify reducing or oxidizing agent/color reagent</i>]
40	Ion selective electrode
41	Electrometric [<i>pH and specific conductance</i>]
50	Gravimetric: [<i>specify filtration, evaporation, and so forth</i>]
51	Turbidimetric

Participating laboratories were also asked to identify the method used, such as those references listed next, to further define the methods.

LABORATORY PERFORMANCE RATINGS

To facilitate laboratory intercomparison, laboratory performance ratings that are based on the analyses reported for each SRS are included in tables 4 through 17 in this report. For each SRS, averages of all the analyte ratings and the number of analyte values reported are given for each participating laboratory. In some cases, laboratory reported values in tables 4 - 17 might have been reformatted in terms of significant figures to meet publication criteria. For example, a reported value of 15 may have been changed to 15.0 or a value of 102.86 may have been changed to 102.9 in these tables. However, the actual reported values by all the laboratories were used to calculate the statistical results and performance ratings presented in the report.

Laboratory determination of each analyte is rated on a scale 4 to 0, based on the absolute Z-value, as listed below:

Rating	Absolute Z-value
4 (Excellent)	0.00 to 0.50
3 (Good)	0.51 to 1.00
2 (Satisfactory)	1.01 to 1.50
1 (Marginal)	1.51 to 2.00
0 (Unsatisfactory)	Greater than 2.00

A weighted laboratory rating greater than 2.0 is considered satisfactory, and ratings less than 2.0 are considered unsatisfactory. Ratings are based on the relative performance of laboratories on specific samples and should be reviewed and evaluated on a case-by-case basis for each laboratory considering such factors as methods used and data needs of specific USGS projects using the laboratory data.

STATISTICAL PRESENTATION OF DATA

Data in this report have been evaluated using nonparametric statistics as described by Hoaglin and others (1983). This statistical approach is a resistant statistic because outliers do not influence the median, as they influence the mean in traditional parametric statistics. Analytical data for each analyte are presented in tabular and graphical forms in tables 11 through 16. Tabulated data for each analyte include the laboratory code number; reported values; analytical method; most probable value (MPV); number of reported analyses; excluding less than values (N); data range; Z-value; and the F-pseudosigma. The Z-value is equivalent to the Z-score of traditional statistics, being the number of deviations the reported value is from the MPV. The Fpseudosigma is equivalent to the standard deviation (σ) of traditional statistics when the data has a Gaussian distribution. If an analyte has a sufficient number of analyses by a given method, usually 7, the Fpseudosigma for that analytical method is reported in the block of data listed for each analyte.

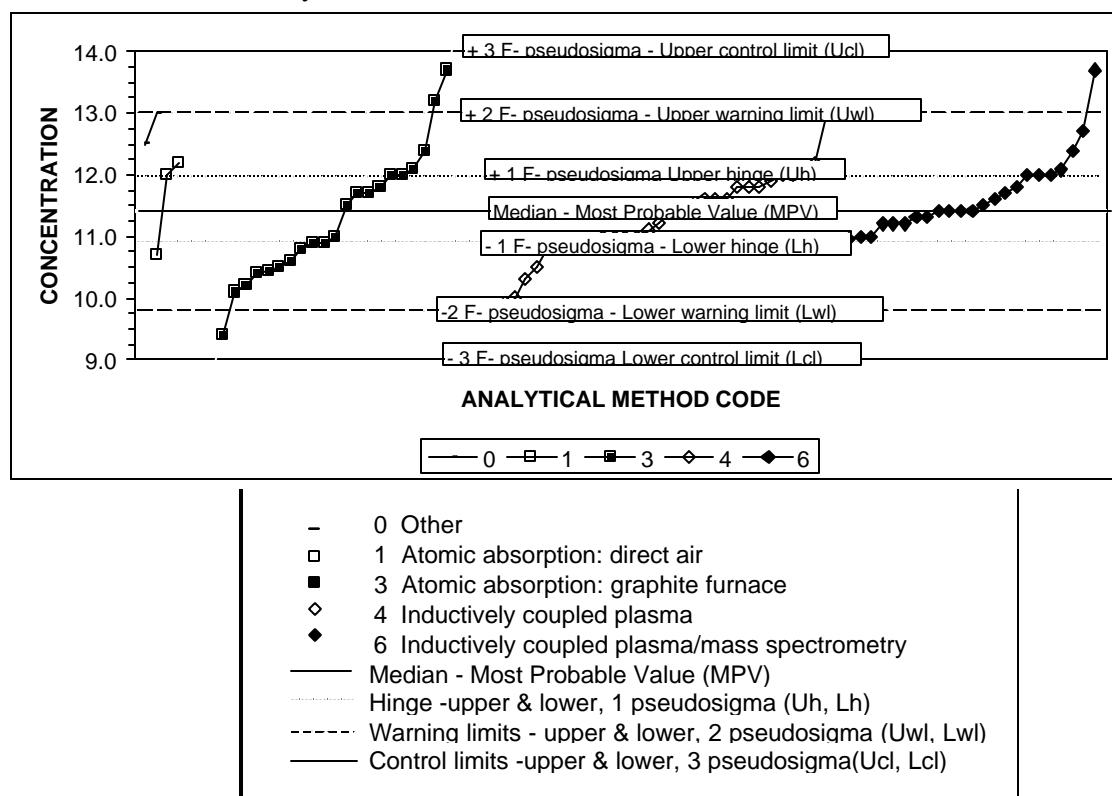

The median value is considered the MPV. The median (midpoint) divides the ordered data into halves and is designated the MPV. The hinges include the middle 50-percent of the data and are the mid-values of the upper and lower halves of the data. The hinges are similar to quartiles, but are not mathematically equivalent. The range of data between the upper hinge (Uh) and the lower hinge (Lh) by comparison of the H-spr value to the Gaussian distribution relation; 67.45 percent of the data "hinges" between plus and minus 1σ , resulting in a H-spr of $2 \times 0.6745 = 1.349\sigma$. This relation allows the calculation of the Fpseudosigma = (H-spr)/1.349. Laboratories reporting "less than" values are not performance rated unless their reported "less than" values are greater than two Z-values from the MPV.

The graphical plot of the reported data is shown in figure 1. The upper and lower boundaries of the graphical plots generally are +3 and -3 F-pseudosigma deviations from the median. Computer-program scaling constraints do not permit these boundaries to always be graphed at exactly these values as shown in the graphical plot. Reported values are grouped by analytical method in ascending order of value. Lines designate the MPV, Uh, Lh, and the UWL and LWL at +2 and -2 F-pseudosigma, respectively. "Less than" values are not plotted.

In some cases, if the F-pseudosigma is less than 5 percent of the MPV, the rating criterion is set to 5 percent of the MPV, as shown in Table 11, page 41.

The term "insufficient data" is included in some of the tables and is used when the number of analyses is less than seven or the calculated F-pseudosigma is greater than the MPV.

In some cases the F-pseudosigma is equal to or greater than the MPV. This results in an MPV = insufficient data. An estimated MPV may be calculated from the available data for a single analytical method, this estimated concentration is denoted by MPV = Estimated. Estimated values are not used to rate laboratories.

NOTE: vertical scale is the concentration value of the individual analyte in appropriate units (see table 2). Horizontal scale is the laboratory reported values separated by method (different symbols) and plotted by increasing values. Numbers next to each symbol at the bottom of the figure are analytical method codes that are described in table 3. Laboratory-reported results greater than 3 F-pseudosigma from the median are not shown on the graphs.

Figure 1. -Statistical parameters shown on reported-data graphs in tables 13 - 20

Definition of analytical methods, abbreviations, and symbols					
<u>Analytical methods and codes</u>					
0. Other/Not reported					
1. AA: direct, air	= atomic absorption: direct air				
2. AA: direct, N ₂ O	= atomic absorption: direct, nitrous oxide				
3. AA: graphite furnace	= atomic absorption: graphite furnace				
4. ICP	= inductively coupled plasma				
5. DCP	= direct current plasma				
6. ICP/MS	= inductively coupled plasma / mass spectrometry				
7. IC	= ion chromatography				
8. AA: cold vapor	= atomic absorption: cold vapor				
11. AA: hydride	= atomic absorption: hydride (reducing agent specified)				
12. AA: flame emission	= atomic absorption: flame emission				
20. Titration color	= Titration colorimetric (specify color reagent)				
22. Color	= colorimetric (color reagent specified)				
<u>Abbreviations and figure symbols</u>					
N =	number of analyses--(excluding less than values)				
MPV =	most probable value				
F-pseudosigma =	nonparametric statistic deviation				
Uh =	upper hinge value				
Lh =	lower hinge value				
Uwl =	upper warning limit - - - -				
Lwl =	lower warning limit - - - -				
Ucl =	upper warning limit				
Lcl =	lower warning limit - - - -				
µg/L =	micrograms per liter				
mg/L =	milligrams per liter				
Lab =	laboratory code number				
NR =	not rated, less than value reported or insufficient data				
< =	less than				
-- =	not reported

Table 12. Statistical summary of reported data for standard reference sample M-152 (major constituents)

Definition of analytical methods, abbreviations, and symbols		
<u>Analytical methods</u>		
0. Other/Not reported	=	
1. AA: direct, air	= atomic absorption: direct, air	
2. AA: direct, N ₂ O	= atomic absorption: direct, nitrous oxide	
3. AA: graphite furnace	= atomic absorption: graphite furnace	
4. ICP	= inductively coupled plasma	
5. DCP	= direct current plasma	
6. ICP/MS	= inductively coupled plasma / mass spectrometry	
7. IC	= ion chromatography	
12. Flame emission	= flame emission	
20. Titrate: color	= titration: colorimetric (color reagent specified)	
21. Titrate: electro	= titration: electrometric	
22. Color:	= colorimetric (color reagent specified)	
40. Ion electrode	= ion selective electrode	
41. Electro	= electrometric: (type meter specified)	
50. Gravimetric	= gravimetric: (precipitate specified)	
51. Turbidimetric	= turbidimetric: (precipitate specified)	
<u>Abbreviations and figure symbols</u>		
N	= number of analyses--(excluding less than values)	
MPV	= most probable value ——	
F-pseudosigma	= nonparametric statistic deviation	
Uh	= upper hinge value	
Lh	= lower hinge value	
Uwl	= upper warning limit ——	
Lwl	= lower warning limit ——	
Ucl	= upper warning limit	
Lcl	= lower warning limit ——	
µg/L	= micrograms per liter	
mg/L	= milligrams per liter	
µS/cm	= microsiemens per centimeter at 25° C	
Lab	= laboratory code number	
NR	= not rated, less than value reported or insufficient data	
<	= less than	
--	= not reported	
<u>Constituent</u>		
Alk	Alkalinity as CaCO ₃	page
B	Boron	65

Laboratories were not rated for alkalinity because the long term stability of alkalinity needs to be verified. The MPV for alkalinity is provided as an estimated value.

Table 13. Statistical summary of reported data for standard reference sample N-63 (nutrient constituents)

Definition of analytical methods, abbreviations, and symbols	
<u>Analytical methods</u>	
0. Other/Not reported	
4. ICP	= inductively coupled plasma
5. DCP	= direct coupled plasma
7. IC	= ion chromatography
20. Titrate: color	= titration: colorimetric (color reagent specified)
21. Titrate: electro	= titration: electrometric
22. Color	= colorimetric (color reagent specified)
40. Ion electrode	= ion selective electrode
<u>Abbreviations and figure symbols</u>	
N =	number of analyses--(excluding less than values)
MPV =	most probable value -----
F-pseudosigma =	nonparametric statistic deviation
Uh =	upper hinge value
Lh =	lower hinge value
Uwl =	upper warning limit -----
Lwl =	lower warning limit -----
Ucl =	upper control limit
Lcl =	lower control limit -----
mg/L =	milligrams per liter
Lab =	laboratory code number
NR =	not rated, less than value reported or insufficient data
< =	less than
-- =	not reported
<u>Constituent</u>	
NH ₃ as N	Ammonia as nitrogen
NH ₃ +Org N as N	Ammonia plus organic nitrogen as nitrogen
NO ₃ as N	Nitrate as nitrogen
Total P as P	Total Phosphorus as phosphorus
PO ₄ as P	Orthophosphate as phosphorus

Table 14. Statistical summary of reported data for standard reference sample N-64 (nutrient constituents)

Definition of analytical methods, abbreviations, and symbols	
<u>Analytical methods</u>	
0. Other/Not reported	
4. ICP	= inductively coupled plasma
5. DCP	= direct coupled plasma
7. IC	= ion chromatography
20. Titrate: color	= titration: colorimetric (color reagent specified)
21. Titrate: electro	= titration: electrometric
22. Color	= colorimetric (color reagent specified)
40. Ion electrode	= ion selective electrode
<u>Abbreviations and figure symbols</u>	
N =	number of analyses--(excluding less than values)
MPV =	most probable value -----
F-pseudosigma =	nonparametric statistic deviation
Uh =	upper hinge value
Lh =	lower hinge value
Uwl =	upper warning limit -----
Lwl =	lower warning limit -----
Ucl =	upper control limit
Lcl =	lower control limit -----
mg/L =	milligrams per liter
Lab =	laboratory code number
NR =	not rated, less than value reported or insufficient data
< =	less than
-- =	not reported
<u>Constituent</u>	
NH ₃ as N	Ammonia as nitrogen
NH ₃ +Org N as N	Ammonia plus organic nitrogen as nitrogen
NO ₃ as N	Nitrate as nitrogen
Total P as P	Total Phosphorus as phosphorus
PO ₄ as P	Orthophosphate as phosphorus
	<u>page</u>

Table 15. Statistical summary of reported data for standard reference sample P-33 (low ionic strength constituents)

Definition of analytical methods, abbreviations, and symbols

Analytical methods

0. Other/Not reported	=	
1. AA: direct, air	=	atomic absorption: direct, air
2. AA: direct, N ₂ O	=	atomic absorption: direct, nitrous oxide
3. AA: graphite furnace	=	atomic absorption: graphite furnace
4. ICP	=	inductively coupled plasma
5. DCP	=	direct current plasma
6. ICP/MS	=	inductively coupled plasma / mass spectrometry
7. IC	=	ion chromatography
12. Flame emission	=	flame emission
20. Titrate: color	=	titration: colorimetric (color reagent specified)
21. Titrate: electro	=	titration: electrometric
22. Color:	=	colorimetric (color reagent specified)
40. Ion electrode	=	ion selective electrode
41. Electro	=	electrometric: (type meter specified)
50. Gravimetric	=	gravimetric: (precipitate specified)
51. Turbidimetric	=	turbidimetric: (precipitate specified)

Abbreviations and figure symbols

N =	number of analyses--(excluding less than values)
MPV =	most probable value -----
F-pseudosigma =	nonparametric statistic deviation
Uh =	upper hinge value
Lh =	lower hinge value
Uwl =	upper warning limit -----.
Lwl =	lower warning limit -----.
Ucl =	upper warning limit
Lcl =	lower warning limit -----.
mg/L =	milligrams per liter
µS/cm =	microsiemens per centimeter at 25° C
Lab =	laboratory code number
NR =	not rated, less than value reported or insufficient data
< =	less than
-- =	not reported

Constituent

Table 17. *Most probable values for constituents and properties in standard reference samples distributed in October 1999*
 [MPV, most probable value; N, number of samples; µg/L, microgram per liter; mg/L, milligram per liter; µS/cm, microsiemens per centimeter at 25 degrees Celsius.]

T-159 (trace constituents)

Analyte	MPV	F-pseudosigma	N	Analyte	MPV	F-pseudosigma	N
Ag	9.67 µg/L	0.91	59	Mg	5.60 mg/L	0.21	73
Al	31.9 µg/L	3.7	47	Mn	22.0 µg/L	1.6	68
As	28.4 µg/L	1.6	59	Mo	41.4 µg/L	2.6	42
B	26.4 µg/L	3.0	30	Na	100 mg/L	4	71
Ba	38.1 µg/L	1.9	54	Ni	22.2 µg/L	1.6	61
Be	10.8 µg/L	0.4	50	Pb	16.6 µg/L	1.2	66
Ca	25.5 mg/L	0.8	75	Sb	13.9 µg/L	1.1	43
Cd	24.0 µg/L	1.6	68	Se	5.49 µg/L	0.83	49
Co	13.3 µg/L	0.9	45	SiO ₂	11.5 mg/L	0.7	42
Cr	26.8 µg/L	1.8	64	Sr	190 µg/L	7	35
Cu	33.4 µg/L	2.5	69	Tl	13.8 µg/L	1.6	40
Fe	48.9 µg/L	6.2	68	U	5.04 µg/L	0.32	12
K	1.52 mg/L	0.13	67	V	14.4 µg/L	1.7	40
Li	8.57 µg/L	1.93	18	Zn	19.2 µg/L	1.9	65

M-152 (major constituents)

Analyte	MPV	F-pseudosigma	N	Analyte	MPV	F-pseudosigma	N
Alkalinity as CaCO ₃	6.00 mg/L	1.49	68	Na	16.3 mg/L	0.9	74
B	92.2 µg/L	7.8	32	total P as P	0.386 mg/L	0.024	56
Ca	3.63 mg/L	0.18	74	pH	6.60 units	0.22	79
Cl	17.3 mg/L	0.9	80	SiO ₂	4.50 mg/L	0.39	53
DSRD	66.5 mg/L	8.2	46	SO ₄	3.76 mg/L	0.33	69
F	1.98 mg/L	0.12	63	Sp Cond	113 µS/cm	3	74
K	0.92 mg/L	0.09	67	Sr	18.3 µg/L	0.9	33
Mg	0.722 mg/L	0.047	73	V	30.0 µg/L	1.9	37

N-63 (nutrient constituents)

Analyte	MPV	F-pseudosigma	N	Analyte	MPV	F-pseudosigma	N
NH ₃ as N	0.150 mg/L	0.021	80	NH ₃ as N	1.38 mg/L	0.08	70
NH ₃ +OrgN as N	0.200 mg/L	0.066	48	NH ₃ +OrgN as N	1.54 mg/L	0.13	47
NO ₃ as N	0.084 mg/L	0.008	79	NO ₃ as N	1.26 mg/L	0.04	71
total P as P	0.158 mg/L	0.010	69	total P as P	0.883 mg/L	0.041	61
PO ₄ as P	0.142 mg/L	0.010	73	PO ₄ as P	0.860 mg/L	0.034	65

P-33 (low ionic strength constituents)

Analyte	MPV	F-pseudosigma	N	Analyte	MPV	F-pseudosigma	N
Acidity	Insufficient data			Na	1.42 mg/L	0.10	46
Ca	0.322 mg/L	0.043	47	pH	4.67 units	0.13	53
Cl	2.38 mg/L	0.18	50	PO ₄ as P	0.045 mg/L	0.007	40
F	0.105 mg/L	0.039	33	SO ₄	1.41 mg/L	0.17	43
K	0.110 mg/L	0.015	38	Sp Cond	20.8 µS/cm	2.4	49
Mg	0.100 mg/L	0.015	42				

Hg-29 (mercury)

Analyte	MPV	F-pseudosigma	N
Hg	0.463 µg/L	0.052	51
